FEDERAL NOTICES

Notice of Revised Record of Decision for Hawaii Range Complex, Department of the Navy

The Department of the Navy (Navy) announces its decision to revise the Record of Decision (ROD) issued on June 26, 2008, and published on July 7, 2008 (73 Fed. Reg. 38424) on the Final Environmental Impact Statement (EIS)/Overseas Environmental Impact Statement (OEIS) for the Hawaii Range Complex (HRC). These revisions address the authorizations recently issued by the National Marine Fisheries Service (NMFS) in December 2008 and January 2009 under the Marine Mammal Protection Act (MMPA) and the Endangered Species Act (ESA) for the incidental harassment of marine mammals resulting from Navy training and Department of Defense (DoD) research, development, testing, and evaluation (RDT&E) activities conducted within the HRC for the proposed action presented in Alternative 3. The Revised ROD is effective February 26, 2009. Except as discussed in the Revised ROD, all other provisions of the June 26, 2008 ROD remain in full force and effect. Implementation of the preferred alternative, initiated in June 2008 will continue. Because the Navy is required by section 5062 of Title 10 of the United States Code to organize, train, equip, and maintain combat-ready forces, ongoing training and RDT&E activities within the HRC will continue at current levels in the event that the proposed action is not implemented.

SUPPLEMENTARY INFORMATION: The Revised ROD has been distributed to all those individuals who requested a copy of the Final EIS/OEIS and agencies and organizations that received a copy of the Final EIS/OEIS. The Revised ROD is available at <http://www.govsupport.us/navynepahawaii/downloads.aspx>. Single copies of the Revised ROD will be made available upon request by contacting the Public Affairs Officer, Pacific Missile Range Facility, Attn: HRC EIS/OEIS REVISED ROD, P.O. Box 128, Kekaha, Hawaii 96752-0128; e-mail: feis_hrc@govsupport.us; or calling the Public Affairs Officer at telephone: 866-767-3347.

Notice of Availability of Environmental Assessment and Finding of No Significant Impact for License Amendment for Unitech Services Group, Honolulu, HI, Nuclear Regulatory Commission

The Nuclear Regulatory Commission (NRC) is considering the issuance of a license amendment to Material License No. 53-13668-01, issued to Unitech Services Group (the licensee), to authorize the release of its former nuclear laundry facility at 3050 Ualena Street, Suite C, in Honolulu, Hawaii, and to terminate the license. NRC has prepared an Environmental Assessment (EA) in support of this amendment in accordance with the requirements of 10 CFR Part 51. Based on the EA, the NRC has concluded that a Finding of No Significant Impact (FONSI) is appropriate. The amendment will be issued following the publication of this Notice.

The purpose of the proposed amendment is to authorize the release of the licensee's facility located in Honolulu, Hawaii. Specifically, the NRC plans to approve the licensee's request to release the facility for unrestricted use and to terminate the license. On September 4, 2008, Unitech Services Group requested that NRC approve the proposed amendment. The staff has prepared this EA in support of the proposed license amendment.

Docket file records indicate that the licensee conducted nuclear laundry operations at the Ualena Street location from 1974-2007. In a letter to the NRC dated August 16, 2007, the licensee stated that it had permanently ceased operations at this site. The primary radionuclide of concern was cobalt-60. Other radionuclides of concern included nickel-63, manganese-54, cobalt-58, iron-55, and zinc-65. The NRC staff determined that a decommissioning plan was not required because decommissioning instructions were provided in the license application. The licensee commenced with decommissioning during October 2007 and completed decommissioning during September 2008. The NRC conducted two inspections during the decommissioning process. During the inspections, the NRC staff observed that the licensee was conducting decommissioning in accordance with license requirements. The licensee submitted a final status survey report to the NRC by letter dated September 4, 2008. The licensee's final status survey results, in conjunction with the NRC's confirmatory survey results, demonstrated that the licensee had effectively remediated the site in accordance with regulatory guidance documents. Because the site had been effectively remediated in accordance with NRC guidance and license requirements, the NRC staff has concluded that the facility meets the criteria of 10 CFR Part 20, Subpart E, for unrestricted release and for termination of the license.
